

Backlog

Stakeholder:

- **User:** Any person who is able to create and edit a board

Terminology:

- **Board:** A collection of zero or more lists
- **List:** A collection of zero or more cards
- **Card:** A container of information about specific tasks

MUST Requirements (Passing Requirements)

Note that ALL minimal requirements have to be met to pass the course.

As a user, I want to be able to ...

- Minimal application (Epic)
 1. Add cards with a title, so that new tasks can be added.
 2. Remove cards, so that old, redundant or finished tasks can be deleted.
 3. Add and remove lists, so that groups of relevant cards can quickly be organized.
 4. Drag and drop tasks, so that the board can be modified more easily and faster.
 5. Use the app without registration, so that boards can be quickly accessed.
 6. Modify the board with multiple users, so that a board can be used by teams.
 7. See changes users made to the board live, so that working with a group is easy.

SHOULD Requirements

Note that no SHOULD/COULD requirements can substitute mandatory requirements.

As a user, I want to be able to ...

- Modify cards (Epic)
 1. Set a card description, so that cards can be made more specific and easier to understand.
 2. Add/remove tags on cards, so that cards can be grouped by subject.
- Modify boards (Epic)
 1. Create boards that are password-protected, so that boards could be read only for some users.
 2. Change the password on a board, if I have write-permission, so that the password isn't fixed.
 3. Create new boards with custom keys, so that I can create multiple boards.
 4. Customize the board to my preferences by changing the background and/or tag colors, so that the board feels more personal.
- Interact easily with the application (Epic)
 1. Join boards by a key, so that a board can be edited together with teammates.
 2. Use keyboard shortcuts, so that the mouse isn't required for navigation.

As an admin, I want to be able to ...

- Have server rights (Epic)
 1. Start the server, so that the application can be used
 2. Shut down the server, so that I can prevent malicious actors from doing anything
- Recover boards for users (Epic)
 1. Change/Remove passwords from boards, so that if a user forgets their password the board can be recovered.
 2. Modify any board, even password-protected boards, so that any damage to them can be fixed.

COULD Requirements (these features are added by the team)

Finish the SHOULD requirements before starting with COULD.

As a user, I want to be able to ...

- Prioritize cards (Epic)
 1. Pin cards to the top or bottom of a list, so that the workflow can be more personalized.
 2. Assign priorities to cards, so that they can easily be organized.
 3. Sort list of cards by different criteria such as priority, so that cards with the highest priority can easily be seen.
 4. Create and delete different priority levels, so that boards can customize this to fit the purpose.
- See metadata of a card (creator, editor, date of creation), so that it's clear what happened on a board (Miscellaneous User Story).
- Quick start a board (Epic)
 1. Get a default layout on board creation, so that projects can quickly be started on without having to create the initial list and card.
 2. Create new boards from existing templates, so that time can be saved setting up the board to fit preferences.

Mockups (optional)
